

Case Study

Deptford Recycling Centre

Surfacing to waste compound

Deptford
Recycling
Centre

Period: Autumn 2015

Scope: Planing | Surfacing | Line Marking | Traffic Management

Survey:

Swift Surfacing Limited were requested by Deptford recycling centre to attend their depot in Deptford to carry out a detailed survey of their current waste compound following a routine visit from the Environmental department of London borough of Lewisham.

Upon completion of the survey Swift Surfacing Limited produced a comprehensive report which highlighted a solution to upgrade the current hardstanding as required. Following a presentation of the proposal and cost Swift Surfacing Limited were appointed to carry out the works.

Coordination:

Deptford recycling centre is one of South East London's busiest recycling centres and so therefore considerable planning and coordination had to take place between Swift Surfacing and Deptford Recycling Centre.

Detailed phasing, traffic and pedestrian management were produced by Swift Surfacing's office based team to be strictly adhered to by the on-site team.

Action

Prior to the commencement of the surfacing package Swift Surfacing carried out extensive civil engineering and preparation of the site compound.

The project was completed on-time and with minimal disruption to Deptford's compound operations. We have since been appointed to carry out the same detailing to another site of theirs in Kent.
