The Best in Decorative Stone Surfacing

A decorative ground finish which enhances the natural beauty of any landscape, resin bound and resin bonded perfectly matches the demands of practical, with the benefits of beautiful.

The fine quality stone finish of resin bound and resin bond enhances the natural beauty of any surrounds.

In a range of colour and textures, it transforms driveways, paths, walkways, parks, roads, courtyards, footpaths and more.

However applied, bound or bonded, guarantees all the beauty of natural stone - without the disadvantages.

Beauty and durability on your doorstep

Colour stable and durable resin based systems for binding aggregates, it just doesn't look great - it's low maintenance, straightforward to lay and tough too!

Simple to lay in even the most demarnding circumstances, you can rest assured that it isn't only the most attractive finish on the market - it's also the most hard wearing.

Inherently strong, the finish adds stability to any surface - asphalt, concrete, timber and even steel.

And as for maintenance, refuse, dirt and leaves, safely brush or pressure wash away restoring original beauty year after year.

Access to literally thousands of grades of aggregates ensures we can exactly match aesthetic demands as well as anti - skid, colour and function specifications. Samples recommended and supplied upon request.

Transform surroundings ... it's your choice

Bound

Bound is an inlaid system combining resin and aggregate that can be applied in a huge range of materials, colour or combinations of both.

This permeable system fully binds all aggregates for a flat, UV stable finish that regulates surfaces, typically laid between 10 and 18mm thick.

Bonded

Bonded is a surface applied system that leaves a totally natural look, harmonising with any surrounding.

Economies in material usage makes for a cost - effective project that can be quickly applied over large areas.

Installed as an overlay that follows new or existing substrates, the final finish demonstrates good anti-slip properties.
